

40 Meter (cw portion)

DOUBLE BAZOOKA ANTENNA

I ran 2 each of these phased end-fire for about 3 years they worked OK, nothing to write home about.

The one thing about these antennas was they were extremely broadband, for 40 meters, that's not a big deal, but for 80 meters, one double bazooka will cover the entire 7.5/80 meter band with less than 3:1 SWR.

There's been a lot said about the double bazooka, personally I think it performed very nicely over a standard dipole.

Over the years, I've learned not to take what one person says about any antenna, If I can build it I will and discover for myself how it performs.
